BG591758 763 bp mRNA EST 12-APR-2001
EST499600 P. infestans-challenged leaf Solanum tuberosum cDNA clone
BPLI10A14 5' sequence, mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /note="Vector: Baluescript SK(-); Site_1: EcoRI; Site_2: Shori; Whole plants were challenged with 450,000 sporanjadml P. infestans US-1(US 940501) in Biotron (Madison, Wisconsin). Leaf tissue was collected at 1, 2, 5, 12, and 24 hours post-challenge and frozen in liquid nitrogen inmediately upon removal. Kennebec plants showed no signs of HR. Katahdin plants (susceptible to P. infestans US-1) were used as controls and showed infection. NOTE: We cannot exclude the possibility that than sociated.

//note="Vector: pBluescript SK -; Site_l: EcoRI; Site_2:
Xhoi: JONA was prepared from polyA+ enriched RNA. The cDNA
was directionally ligated into the Unizap XR vector from
Stratagene and packaged using Gigapack III Gold packaging
extracts. Plasmids containing cDNA inserts were excised
from the recombinant lambda-Zap phage using Ex-assist
helper phage and propagated in XLOLR cells."

/dev_stage="effective root nodules harvested one month post inoculation with Sinorhizoblum melilot!"
//lab_host="E. col! strain xXOLR"
//note="Vector: pBluescript SK-; Site_1: EcoRI; Site_2:
Xhoi; cNNA was prepared from polyA+ enriched RNA from effective root nodules harvested one month post inoculation with Sinorhizoblum meliloti. The cDNA was directionally ligated into the Uni-zAP XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-ZAP phage using Ex-Assist helper phage and propagated in XLOLR cells."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 (bases 1 to 497)

The software programs used to predict genes include: Grail tinformatics Group, Oak Ridge National Laboratory, http://compbio.orni.gov/Grail-1.3/, GENSCAN (Chris Burge, MIT, http://CR-081.mit.edu/GENSCAN.html), NetGene2 (S.M. Heksgaard, et al., CBS, Technical University of Denmark, http://www.cbs.dtu.dk/services/NetGene2/) and SplicePredictor (Volker Brendel, Stanford University, http://gremlinl.zcol.iastate.edu/cgi-bin/sp.cgi). Genes encoding tRNAs are predicted by tRNAscan.SE (Sean Eddy, Washington University, School of Medicine, St. Louis, http://genome.wustl.edu/eddy/tRNAscan.SE/). This sequence may not be the entire insert of this clone. It may be shorter because we remove overlaps between neighboring submissions. The 5′ clone is K1556 and the 3′ clone is X3X3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Direct Submission
Submitted (18-AUG-1998) Yasukazu Nakamura, Kazusa DNA Research
Institute, Department of Plant Gene Research; 1532-3, Yana,
Kisarazu, Chiba 292-0812, Japan (E-mail:ynakamu@kazusa.or.jp,

http://www.kazusa.or.jp/Kaoso/cgi-bin/agd_graph.cgi?c=mxFl2
Genes with similarity to proteins in the databases are described in
'product' or 'note' qualifiers. Genes that have no significant
protein similarity are described as 'unknown protein'
protein similarity are described as 'unknown protein'

                                                                                                                                                                        Genes with similarity to proteins in the databases are described as Genes with similarity to proteins in the databases are described similarity but no 'similar to'. Genes that have EST similarity but no significant protein similarity are described as 'nuknown proteins'. Genes that are annotated based only on gene prediction software are described as 'hypothetical proteins'. The software programs used to predict genes include: Grail (informatics Group, Oak Ridge National Laboratory, http://compbio.ornl.gov/section/index.html), GENSCAN (chris Burge, http://gondic.stanford.edu/-chris/GENSCANW html), Fexa (V.Solovyev & A.Salamov, Sanger Centre, http://genomic.sanger.ac.uk/), and NetPlantGene (S.M. Hebsgaard, et al., CBS, Technical University of Denmark, http://www.cbs.dtu.dk/NetPlantGene.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    KGIKTDLKGYCESHININEWHINIEKPDVYPDECVSHIKDYMTSGYKDDVARTYDEVI
